

TANGO EXTEND

The Business SIM™

SOLUTION NOTE

- » Put a desk phone in every employee's pocket
- » Use the native dialer, not an App, to make business calls
- » Route all mobile business calls through the existing UC platform
- » Separate all business use from personal use on every device
- » Record and monitor mobile voice calls and texts

Tango Extend is a dedicated business SIM allowing employees and contractors to use their existing mobile devices for business communications.

An existing business number is assigned to the Tango Extend SIM and all business calls are then routed via the existing UC platform.

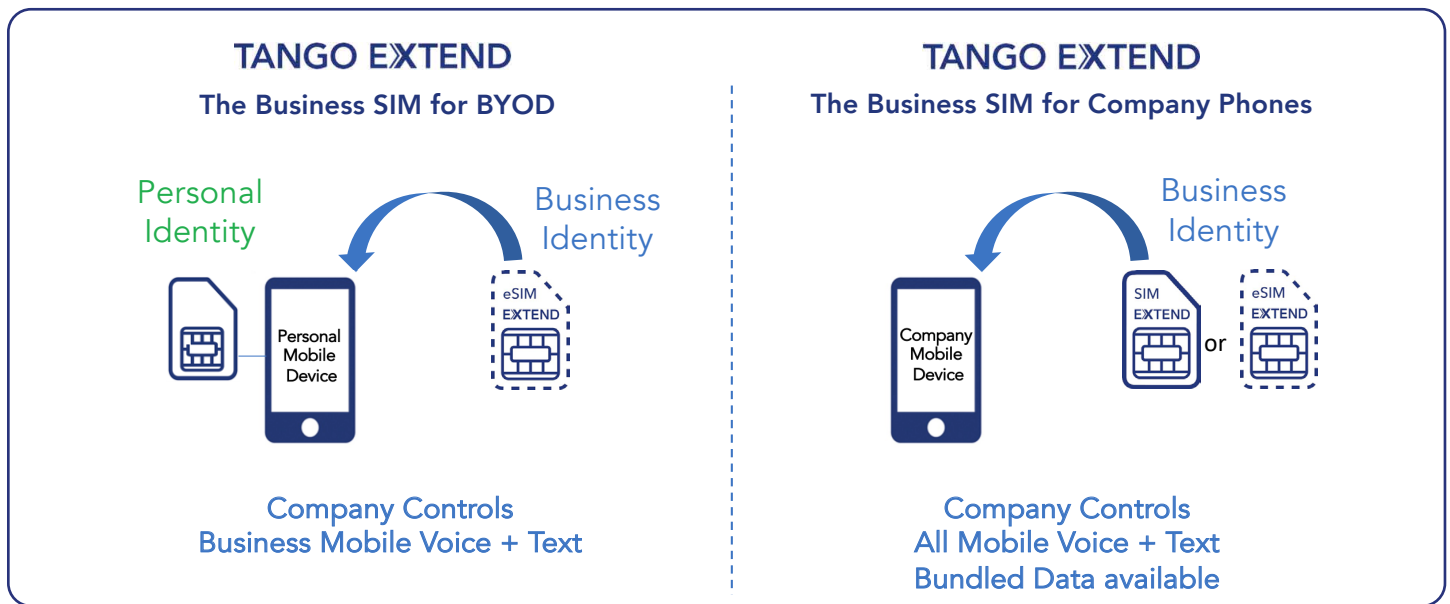

Mobile devices can be BYOD or company provided and many support eSIMs so provisioning an end user can be done in minutes, using a QR code.

Users no longer have to launch an App to make a business call. Extend provides business features such as four-digit short code dialing, call hold and conferencing, all from the familiar native mobile phone interface.

Modern smartphones are very good at managing contacts and separating the use of two SIMs, allowing choice over which line to use for calls and text messages. This keeps personal calls private and completely separate from business communications.

Business calls and text messages can be recorded and analyzed for regulatory compliance or customer service quality control purposes, all through the existing UC platform.

Tango Extend is the go-to simple, app-less solution for mobile unified communications. It supports Mobile First strategies and the communication needs of today's hybrid workforce.

Key Benefits of Tango Extend

- » Reduce costs – retire expensive desk phones
- » Business quality voice with mobile service, no apps
- » Cut carbon footprint by retiring company mobiles
- » Stop business calls using personal numbers
- » Eliminate expensing personal phones and overhead
- » End supporting UC apps and enforcing usage policies
