

# MOBILE X

## MOBILE COMMUNICATIONS FOR HYBRID WORK

SOLUTION NOTE

### Business Mobile for Work-from-Anywhere

- Mobile communications fully integrated with your company's UC Platform
- You control mobile voice, messaging and data service usage
- Maximize workforce productivity for employees when out of the office
- Reduce landlines, control costs, go "Mobile First"
- Single subscription, single SIM, single supplier for all mobile communications
- Creates a Global Private Mobile Network exclusive to your organization
- Teleworkers, remote workers, field workers, logistics, firstline workers

Mobile-X UC Link is a service that enables mobile devices to be used as native extensions on existing enterprise UC systems, regardless of vendor.

Mobile-X is a SIM-based solution with a Cloud mobile network at its core, which is connected directly to your company's UC system. This allows you to treat every mobile phone as an office extension with corporate control of every call. Now the IT manager can focus on the policies and workflows which drive up efficiency, drive down cost and improve communications for the mobile workforce.

Mobile-X UC Link is a global deployable solution, so works across multiple vendors, borders and device types.

For the distributed workforce or hybrid work models, services are presented via the standard mobile phone interface, so no separate UC app is required. Standard mobile packages with full international roaming mean that it can be used seamlessly and securely, anywhere.

## Features & Capabilities

- Leverages investment in existing UC platform
- Cloud based – quick and easy to deploy
- Turns a mobile device into a native extension of existing voice and UC platforms
- Brings mobile calls and texts to a single business number under enterprise control
- Ensures business-grade communications quality for business calls
- Enforces corporate identity and corporate policies on all mobile communications
- Supports Dual Persona (Business & Personal use)

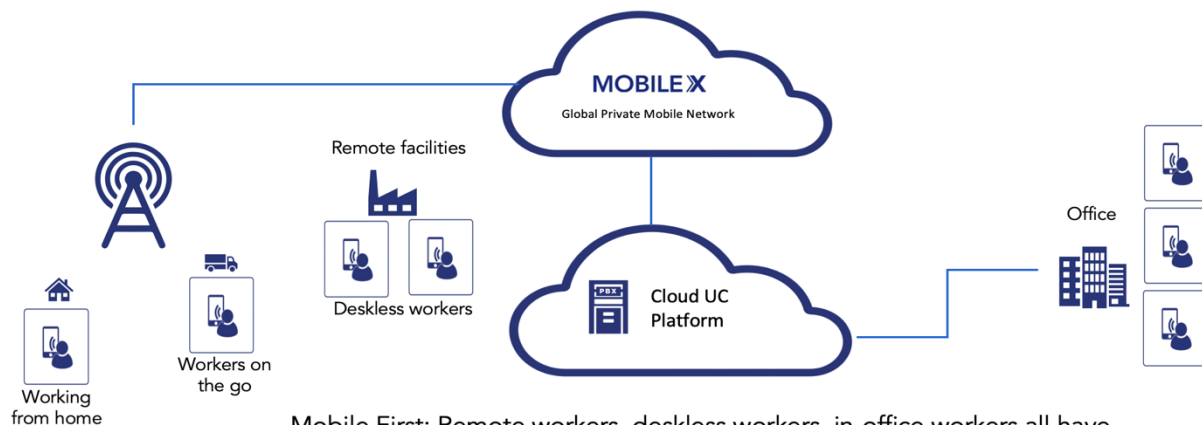

Mobile-X UC Link is a unique next-generation mobile communications service featuring breakthrough technologies pioneered by Tango Networks.

Industry standard API extensions enable access to powerful applications and features, including call and SMS recording.

Mobile-X SIMs are capable of working on multiple local mobile networks, which offers flexibility, particularly with in-building coverage. They support 4G data speeds where available and can be used just like any existing legacy SIM. Flexible numbering solutions allow existing mobile numbers and DIDs to be preserved.

Provisioning, billing and service management is all available through a simple but powerful administration portal.

Mobile-X UC Link's unique control overlay provides a foundation for adopting Private LTE, CBRS and other unlicensed spectrum deployments for next-generation enterprise wireless.

Mobile First: Remote workers, deskless workers, in-office workers all have seamless business communications

Extension dialing, hold, transfer, conferencing

No special apps needed

Business identity used for all calls

For more than a decade Tango Networks has been a worldwide innovation leader in solutions that enable businesses to adopt mobile communications for greater efficiency and productivity.
