

TANGO EXTEND

Mobile Voice & Text
Recording for Financial
Service Compliance

VERTICAL APPLICATION

The largest banks and financial services firms are being hit with billions in fines because employees are breaching regulatory rules when doing business on their personal mobile phones.

Tango Extend restores compliance by enabling the capture and recording of voice and text communications on any smartphone, including personal BYOD phones and corporate liable phones.

Now your workforce can be out of the office,
in touch and compliant all at the same time.

- » Embed a full-featured business extension SIM in any BYOD or corporate liable phone.
- » Record and monitor business voice and text on BYOD phones without violating employee privacy.
- » The business SIM integrates with your existing UC platform and routes every call through it.
- » Allocate an existing business number to the SIM for a truly Hybrid working solution.
- » End Users can use their own devices and can use the native dialer without any apps.

Tango Extend is the Business SIM, designed to put you in control of mobile communications used by the work-from-anywhere workforce.

The SIM and mobile service integrate seamlessly into your company's communications platform and recording systems. It's a native mobile service, so employees can use their phones' native interfaces for voice calling, without having to call from an app.

When used as a second SIM in a BYOD device, it keeps all personal and business calls separate and secure.

Business communications are then automatically captured, recorded, monitored and analysed for regulatory compliance using the same systems you use for office-based phones and landlines.

The industry is using Tango Extend to enable employees to work from anywhere and stay compliant. They are cutting landlines and expensive desk phones, while employees enjoy using the devices they want to use.
